Investment Rationale

The opportunity ahead for China focused biopharmaceutical companies is promising both at home and on the global stage. Recent reforms put in place by the China Food and Drug Administration are modernizing the industry in China while rising standards of living are putting innovative medicines within reach of more patients in the region. At the same time, quality science and significant investment in research and development by Chinese companies are producing new medicines with global implications. These factors may position China's biopharmaceutical industry for considerable growth in the future. The China BioPharma ETF gives investors a front row seat to this transformation.

Index Provider

Loncar Investments LLC was founded by noted independent biotech investor and analyst Brad Loncar. Mr. Loncar regularly provides his insight and analysis on this market segment to the investment community via a variety of publishing platforms. Through Loncar Investments LLC, Mr. Loncar incorporates his extensive research into biotech companies and technologies to develop indexes focused on precise investment opportunities.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company, and it may be obtained by calling 800-617-0004. Read it carefully before investing.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, such as China, it is more likely to be impacted by events or conditions affecting that country or region. A significant portion of the Fund's assets will be invested in the biotechnology and pharmaceutical industries, which expose the Fund to the risks of the following sector. Companies in the health care sector are subject to extensive government regulation. The costs associated with developing new drugs can be significant, and the results are unpredictable. Newly developed drugs may be susceptible to product obsolescence due to intense competition from new products and less costly generic products. The process for obtaining regulatory approval by the U.S. Food and Drug Administration or other governmental regulatory authorities is long and costly and there can be no assurance that the necessary approvals will be obtained or maintained. The values of many companies in the health care sector may be significantly affected by such things as the expiration of patents or the loss of, or the inability to enforce, intellectual property rights.

The Fund may invest in foreign securities, which involve political, economic, currency risk, greater volatility, and differences in accounting methods. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the investment. The Fund invests in smaller companies, which may have more limited liquidity and greater volatility compared to larger companies. The Fund is considered non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. The Fund is not actively managed and the Fund's sub-adviser would not sell shares of an equity security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index in accordance with the Index methodology. The biopharmaceutical industry in China is strictly regulated and changes in such regulations, including banning or limiting certain products, may have a material adverse effect on the operations, revenues, and profitability of Biopharma Companies. The laws and regulations applicable to the process of administrative approval of medicine and its production in China require entities producing biopharma products to comply strictly with certain standards and specifications promulgated by the government.

The Loncar China BioPharma Index (LCHINA Index) is an index of 30 securities that have a strategic focus on advancing China's biopharma industry. Quotes for the index can be found under the symbol "LCHINA" on the Bloomberg Professional service and other financial data providers. One may not directly invest in an index.

The Hong Kong Stock Exchange (HKEX) is the primary stock exchange in the Hong Kong Special Administrative Region of China. Nasdaq is one of the primary stock exchanges in the United States.

The Loncar China BioPharma ETF is distributed by Quasar Distributors, LLC. Loncar Investments is the index provider of the Fund. INDX, LLC helps Loncar with risk management and index construction. Quasar Distributors, LLC is not affiliated with Loncar Investments or INDX. [1019]
