North Shore Global Uranium Mining ETF

Principal Listing Exchange for the Fund: NYSE Arca, Inc.

Ticker Symbol: URNM

Neither the U.S. Securities and Exchange Commission (“SEC”) nor any state securities commission has approved or disapproved of these securities or passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of the Fund’s shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to elect to receive shareholder reports and other Fund communications electronically.

You may elect to receive all future reports in paper free of charge. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of your shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

Fund Summary

Investment Objective

The North Shore Global Uranium Mining ETF (the “Fund”) seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of the North Shore Global Uranium Mining Index (the “Index”).

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of shares of the Fund.

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fee	0.85%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.85%

¹ Other Expenses are based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	3 Years
\$87	\$271

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when shares of the Fund are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. Because the Fund is new, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund will normally invest at least 80% of its total assets in securities of the Index. The Index is designed to track the performance of companies that devote at least 50% of their assets to (i) mining, exploration, development, and production of uranium; and/or (ii) holding physical

uranium, owning uranium royalties, or engaging in other, non-mining activities that support the uranium mining industry, including, but not limited to, infrastructure and labor costs (“Uranium Companies”). Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities of Uranium Companies. This investment policy may be changed without shareholder approval, upon 60 days’ notice to shareholders.

The universe of eligible index components includes exchange-listed equity securities of companies that have or expect to have a significant portion of their business operations related to uranium. Such companies are identified through the use of a proprietary selection methodology that includes a review of industry publications, sell side research, and fundamental research, as well as meetings with management. Companies in this eligible universe are included in the Index subject to the following restrictions:

- All securities must have a company level minimum market capitalization of \$25 million.
- An aggregate weight of 82.5% of the Index is assigned to companies that are involved in the mining, exploration, development, and production of uranium. An aggregate weight of 17.5% of the Index is assigned to companies that hold physical uranium, uranium royalties, or other non-mining assets.
- An aggregate weight of at least 90% is allocated to companies with company level market capitalization greater than or equal \$100 million.
- An aggregate weight of at least 70% is allocated to companies with a minimum trading volume of 250,000 shares.
- The components within each of these buckets are market cap weighted.
- A single security weight cap of 15% and a single security floor of 0.50% is applied.
- A single security weight cap of 3.30% is applied to non-pure play uranium miners, explorers, developers and producers.
- No more than five issuers will have a weight greater than 4.70% of the Index and the aggregate weight of all the components with a weight greater than 5% is capped at 50%.
- If multiple share classes exist for a company, the following preference order is followed:
 - If the company is already included in the Index, the existing share class is retained.
 - If the company is not already included in the Index and an American Depositary Receipt (“ADR”) representing the company’s stock is available, such ADR will be given preference over all other share classes.
 - In all other cases, the most liquid share class is considered for inclusion in the portfolio.

The Index consists of securities of both U.S. and foreign issuers, including securities of issuers located in emerging market countries. As of November 1, 2019, a significant portion of the Index consisted of securities of Australian, Canadian, and United Kingdom issuers.

The Index is reconstituted and rebalanced on a quarterly basis in March, June, September, and December. Deletions from the Index may be made at any time due to changes in business, mergers, acquisitions, bankruptcies, suspensions, de-listings and spin-offs. The Index is unmanaged and cannot be invested in directly.

The Fund employs a “passive management” investment strategy in seeking to achieve its investment objective. The Fund’s adviser, Exchange Traded Concepts, LLC (the “Adviser”),

generally will use a replication methodology, meaning it will invest in all of the securities comprising the Index in proportion to the weightings in the Index. However, the Adviser may utilize a sampling methodology under various circumstances, including when it may not be possible or practicable to purchase all of the securities in the Index. The Adviser expects that over time, if the Fund has sufficient assets, the correlation between the Fund's performance, before fees and expenses, and that of the Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund is non-diversified and may invest a greater percentage of its assets in a particular issuer than a diversified fund. The Fund may invest up to 20% of its assets in investments that are not included in the Index, but that the Adviser believes will help the Fund track the Index.

The Fund will concentrate its investments (*i.e.*, invest more than 25% of its total assets) in a particular industry or group of industries to approximately the same extent that the Index concentrates in an industry or group of industries. As of November 1, 2019, the Index was concentrated in the oil, gas and consumable fuels industry. In addition, in replicating the Index, the Fund may from time to time invest a significant portion of its assets in the securities of companies in one or more sectors. As of November 1, 2019, a significant portion of the Index consisted of companies in the energy sector.

The index provider is North Shore Indices, Inc. (the "Index Provider"), which is not affiliated with the Fund or the Adviser. The Index Provider developed the methodology for determining the securities to be included in the Index and is responsible for the ongoing maintenance of the Index. The Index is calculated by Indxx, LLC, which is not affiliated with the Fund or the Adviser.

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. The principal risks affecting shareholders' investments in the Fund are set forth below.

Commodity Exposure Risk: The Fund invests in Uranium Companies, which may be susceptible to fluctuations in the underlying commodities market. Commodity prices may be influenced or characterized by unpredictable factors, including, where applicable, high volatility, changes in supply and demand relationships, weather, agriculture, trade, changes in interest rates and monetary and other governmental policies, action and inaction. Securities of companies held by the Fund that are dependent on a single commodity, or are concentrated on a single commodity sector, may typically exhibit even higher volatility attributable to commodity prices. The Index measures the performance of Uranium Companies and not the performance of the price of uranium itself. The securities of Uranium Companies may under- or over-perform the price of uranium over the short-term or the long-term.

Common Stock Risk: Common stock holds the lowest priority in the capital structure of a company, and, therefore, takes the largest share of the company's risk and its accompanying volatility. The value of the common stock held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or facts relating to specific companies in which the Fund invests.

Currency Exchange Rate Risk: The Fund may invest a relatively large percentage of its assets in securities denominated in non-U.S. currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your shares. Because the Fund's net asset value ("NAV") is determined in U.S. dollars, the Fund's NAV could decline if the currency of the non-U.S. market in which the Fund invests depreciates against the U.S. dollar, even if the value of the Fund's holdings, measured in the foreign currency, increases. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Depository Receipt Risk: ADRs are subject to the risks associated with investing directly in foreign securities. In addition, investments in ADRs may be less liquid than the underlying shares in their primary trading market.

Early Close/Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments, and/or may incur substantial trading losses.

Emerging Markets Securities Risk: Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets, and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets.

Foreign Securities Risk: Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to expropriation, nationalization or adverse political or economic developments. Foreign securities may have relatively low market liquidity and decreased publicly available information about issuers. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Non-U.S. issuers may also be subject to inconsistent and potentially less stringent accounting, auditing, financial reporting and investor protection standards than U.S. issuers. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments. In addition, where all or a portion of the Fund's portfolio holdings trade in markets that are closed when the Fund's market is open, there may be valuation differences that could lead to differences between the Fund's market price and the value of the Fund's portfolio holdings.

Geographic Investment Risk: To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region. As of November 1, 2019, a significant portion of the Index consisted of securities of Australian, Canadian, and United Kingdom issuers.

Australia Risk: Investments in securities of Australian issuers involve risks and special considerations not typically associated with investments in the U.S. securities markets. The

Australian economy is heavily dependent on exports from the agriculture and mining industries. This makes the Australian economy susceptible to fluctuations in the commodity markets. Australia is also dependent on trading with key trading partners.

Canada Risk: The Canadian economy is susceptible to adverse changes in certain commodities markets, including those related to the agricultural and mining industries. It is also heavily dependent on trading with key partners. Any reduction in this trading may adversely affect the Canadian economy.

United Kingdom Risk: The United Kingdom trades heavily with other European countries and the United States and may be impacted by changes to the economic health of their key trading partners. The United Kingdom also relies heavily on the export of financial services. Accordingly, a downturn in the financial services sector may have an adverse impact on the United Kingdom's economy. In June 2016, the United Kingdom voted in a referendum to leave the European Union (known as “Brexit”). It remains unclear how withdrawal negotiations will be concluded and what the potential consequences of Brexit may be, but the economies of the United Kingdom and Europe, as well as the broader global economy, could be significantly impacted by Brexit, which may result in lower economic growth and increased volatility and illiquidity across global markets.

Illiquid Investments Risk: This risk exists when particular Fund investments are difficult to purchase or sell, which can reduce the Fund’s returns because the Fund may be unable to transact at advantageous times or prices.

Index Tracking Risk: The Fund’s return may not match or achieve a high degree of correlation with the return of the Index. To the extent the Fund utilizes a sampling approach, it may experience tracking error to a greater extent than if the Fund sought to replicate the Index.

Industry Concentration Risk: Because the Fund’s assets will be concentrated in an industry or group of industries to the extent that the Index concentrates in a particular industry or group of industries, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries. As of November 1, 2019, the Index was concentrated in the oil, gas and consumable fuels industry.

Oil, Gas and Consumable Fuels Industry Risk: The oil, gas and consumable fuels industry is cyclical and highly dependent on the market price of fuel. The market value of companies in the oil, gas and consumable fuels industry are strongly affected by the levels and volatility of global commodity prices, supply and demand, capital expenditures on exploration and production, energy conservation efforts, the prices of alternative fuels, exchange rates and technological advances. Companies in this sector are subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these companies’ earnings. A significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities. As a result, governmental budget restraints may have a material adverse effect on the stock prices of companies in the industry.

Issuer-Specific Risk: Fund performance depends on the performance of individual securities to which the Fund has exposure. Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

Large-Capitalization Risk: Returns on investments in securities of large companies could trail the returns on investments in securities of smaller and mid-sized companies.

Limited Authorized Participants, Market Makers and Liquidity Providers Risk: Because the Fund is an exchange-traded fund (“ETF”), only a limited number of institutional investors (known as “Authorized Participants”) are authorized to purchase and redeem shares directly from the Fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares of the Fund may trade at a material discount to NAV and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Market Risk: The values of equity securities in the Index could decline generally or could underperform other investments.

Micro-Capitalization Risk: The micro-capitalization companies in which the Fund may invest may be more vulnerable to adverse business or economic events than larger, more established companies, and may underperform other segments of the market or the equity market as a whole. Securities of micro-capitalization companies generally trade in lower volumes, are often more vulnerable to market volatility, and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole.

New/Smaller Fund Risk: A new or smaller fund is subject to the risk that its performance may not represent how the fund is expected to or may perform in the long term. In addition, new funds have limited operating histories for investors to evaluate and new and smaller funds may not attract sufficient assets to achieve investment and trading efficiencies. There can be no assurance that the Fund will achieve an economically viable size, in which case it could ultimately liquidate. The Fund may be liquidated by the Board of Trustees without a shareholder vote. In a liquidation, shareholders of the Fund will receive an amount equal to the Fund’s NAV, after deducting the costs of liquidation, including the transaction costs of disposing of the Fund’s portfolio investments. Receipt of a liquidation distribution may have negative tax consequences for shareholders. Additionally, during the Fund’s liquidation all or a portion of the Fund’s portfolio may be invested in a manner not consistent with its investment objective and investment policies.

Non-Diversification Risk: The Fund is a non-diversified investment company under the Investment Company Act of 1940 (the “1940 Act”), meaning that, as compared to a diversified fund, it can invest a greater percentage of its assets in securities issued by or representing a small number of issuers. As a result, the performance of these issuers can have a substantial impact on the Fund’s performance.

Operational Risk: The Fund and its service providers may experience disruptions that arise from human error, processing and communications errors, counterparty or third-party errors, technology or systems failures, any of which may have an adverse impact on the Fund.

Passive Investment Risk: The Fund is not actively managed and, therefore, the Fund would not sell a security due to current or projected underperformance of the security, industry, or sector unless that security is removed from the Index or selling the security is otherwise required upon a rebalancing of the Index.

Sector Focus Risk: The Fund may invest a significant portion of its assets in one or more sectors and thus will be more susceptible to the risks affecting those sectors. While the Fund's sector exposure is expected to vary over time based on the composition of the Index, the Fund anticipates that it may be subject to some or all of the risks described below. The list below is not a comprehensive list of the sectors to which the Fund may have exposure over time and should not be relied on as such.

Energy Sector Risk: Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves. Oil and gas exploration and production can be significantly affected by natural disasters, as well as changes in exchange rates, interest rates, government regulation, world events and economic conditions. These companies may be at risk for environmental damage claims.

Small- and Mid-Capitalization Risk: The small- and mid-capitalization companies in which the Fund invests may be more vulnerable to adverse business or economic events than larger, more established companies, and may underperform other segments of the market or the equity market as a whole. Securities of small- and mid-capitalization companies generally trade in lower volumes, are often more vulnerable to market volatility, and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole.

Trading Risk: Shares of the Fund may trade on the NYSE Arca, Inc. (the "Exchange") above or below their NAV. The NAV of shares of the Fund will fluctuate with changes in the market value of the Fund's holdings. In addition, although the Fund's shares are currently listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable.

Uranium Companies Risk: Uranium Companies may be significantly subject to the effects of competitive pressures in the uranium business and the price of uranium. The price of uranium may be affected by changes in inflation rates, interest rates, monetary policy, economic conditions and political stability. The price of uranium may fluctuate substantially over short periods of time, therefore the Fund's share price may be more volatile than other types of investments. In addition, Uranium Companies may also be significantly affected by import controls, worldwide competition, liability for environmental damage, depletion of resources, mandated expenditures for safety and pollution control devices, political and economic conditions in uranium producing

and consuming countries, and uranium production levels and costs of production. The primary demand for uranium is from the nuclear energy industry, which uses uranium as fuel for nuclear power plants. Demand for nuclear energy may face considerable risk as a result of, among other risks, incidents and accidents, breaches of security, ill-intentioned acts or terrorism, air crashes, natural disasters (such as floods or earthquakes), equipment malfunctions or mishandling in storage, handling, transportation, treatment or conditioning of substances and nuclear materials.

Performance Information

The Fund is new and therefore has no performance history. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by comparing the Fund's return to a broad measure of market performance.

Investment Adviser

Exchange Traded Concepts, LLC serves as the investment adviser to the Fund.

Portfolio Managers

Andrew Serowik, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in November 2019.

Travis Trampe, Portfolio Manager of the Adviser, has served as a portfolio manager of the Fund since its inception in November 2019.

Purchase and Sale of Fund Shares

Individual shares of the Fund may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The Fund's shares are listed on the Exchange. The price of the Fund's shares is based on market price, and because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Fund issues (or redeems) shares to certain institutional investors (typically market makers or other broker-dealers) only in large blocks of at least 25,000 shares known as "Creation Units." Creation Unit transactions are typically conducted in exchange for the deposit or delivery of in-kind securities and/or cash constituting a substantial replication, or a representation, of the securities included in the Fund's benchmark Index. Investors buying or selling Fund shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. **Except when aggregated in Creation Units, the Fund's shares are not redeemable securities.**

Tax Information

Distributions made by the Fund may be taxable as ordinary income, qualified dividend income, or long-term capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or individual retirement account. In that case, you may be taxed when you take a

distribution from such account, depending on the type of account, the circumstances of your distribution, and other factors.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Index Information/Trademark License/Disclaimers

The North Shore Global Uranium Mining Index was created on June 30, 2017 and is designed to measure the performance of companies that are involved in the mining, exploration, development, and production of uranium, and companies that hold physical uranium, uranium royalties, or other non-mining assets. As of November 1, 2019, the Index was comprised of 26 securities. As of November 1, 2019, the average market capitalization and one-year trading volume of the Index components were \$9.45 billion and 1.67 million, respectively.

The Index Provider is not affiliated with the Trust, the Adviser, the Fund's administrator, custodian, transfer agent or distributor, or any of their respective affiliates. The Adviser has entered into a license agreement with the Index Provider pursuant to which the Adviser pays a fee to use the Index. The Adviser is sub-licensing rights to the Index to the Fund at no charge.

The Index Provider has retained a third party, Indxx, LLC, to calculate the Index. Indxx, LLC is not affiliated with the Trust, the Adviser, the Fund's administrator, custodian, transfer agent or distributor, or any of their respective affiliates.

Additional Principal Investment Strategies Information

The Fund, using an "indexing" investment approach, seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of the Index. A number of factors may affect the Fund's ability to achieve a high correlation with the Index, including the degree to which the Fund utilizes a sampling methodology. There can be no guarantee that the Fund will achieve a high degree of correlation.

The Fund may sell securities that are represented in the Index or purchase securities not yet represented in the Index, in anticipation of their removal from or addition to the Index. There may also be instances in which the Adviser may choose to overweight securities in the Index, thus causing the Adviser to purchase or sell securities not in the Index which the Adviser believes are appropriate to substitute for certain securities in the Index or utilize various combinations of other available investment techniques in seeking to track the Index. The Fund will not take defensive positions.

The Fund may change its investment objective and index without shareholder approval.

Under normal market circumstances, the Fund expects to invest at least 40% of its net assets in non-U.S. securities and will invest in companies in at least three countries (including the United States). The Fund considers “non-U.S. securities” to include (i) securities of issuers that are organized under the laws of a country that is not the U.S.; (ii) securities that are traded principally in a country that is not the U.S.; or (iii) securities of issuers that, during the issuer’s most recent fiscal year, derived at least 50% of their revenues or profits from goods produced or sold, investments made, or services performed in a country that is not the U.S. or that have at least 50% of their assets in such a country.

Additional Principal Risk Information

The following section provides additional information regarding the principal risks of the Fund.

Commodity Exposure Risk: The Fund invests in Uranium Companies, which may be susceptible to fluctuations in the underlying commodities market. Any negative changes in such commodities market could have a great impact on the Fund. Commodity prices may be influenced or characterized by unpredictable factors, including, where applicable, high volatility, changes in supply and demand relationships, weather, agriculture, trade, changes in interest rates and monetary and other governmental policies, action and inaction. Securities of companies held by the Fund that are dependent on a single commodity, or are concentrated on a single commodity sector, may typically exhibit even higher volatility attributable to commodity prices.

Common Stock Risk: Common stock holds the lowest priority in the capital structure of a company, and, therefore, takes the largest share of the company’s risk and its accompanying volatility. Holders of common stocks incur more risk than holders of preferred stocks and debt obligations because common stockholders, as owners of the issuer, generally have inferior rights to receive payments from the issuer in comparison with the rights of creditors or holders of debt obligations or preferred stocks. Further, unlike debt securities, which typically have a stated principal amount payable at maturity (whose value, however, is subject to market fluctuations prior thereto), or preferred stocks, which typically have a liquidation preference and which may have stated optional or mandatory redemption provisions, common stocks have neither a fixed principal amount nor a maturity. An adverse event, such as an unfavorable earnings report, may depress the value of a particular common stock. Also, prices of common stocks are susceptible to general stock market fluctuations and economic conditions, and to volatile increases and decreases in value as market confidence and perceptions change. These investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; and global or regional political, economic or banking crises.

Currency Exchange Rate Risk: Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund’s investments and the value of your shares. Because the Fund’s NAV is determined on the basis of U.S. dollars, the U.S. dollar value of your investment in the Fund may go down if the value of the local currency of the non-U.S. markets in which the Fund invests depreciates against the U.S. dollar. This is true even if the local currency value of securities in the Fund’s holdings goes up. Conversely, the dollar value of your investment in the Fund may go up if the value of the local currency appreciates against the U.S. dollar. The value of the U.S. dollar measured against other currencies is influenced by a variety of factors. These factors include: national debt levels and trade deficits, changes in balances of payments and

trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning, and you may lose money.

Depository Receipt Risk: ADRs are dollar-denominated depository receipts typically issued by an American bank or trust company that evidence an ownership interest in a security or pool of securities issued by a foreign corporation. ADRs are listed and traded in the United States and designed for use in the U.S. securities markets. ADRs are subject to the risks associated with investing directly in foreign securities, which are described below. In addition, investments in ADRs may be less liquid than the underlying shares in their primary trading market and may be more volatile.

Early Close/Trading Halt Risk: An exchange or market may close early or issue trading halts on specific securities or financial instruments. The ability to trade certain securities or financial instruments may be restricted, which may disrupt the Fund's creation and redemption process, potentially affect the price at which the Fund's shares trade in the secondary market, and/or result in the Fund being unable to trade certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments, and/or may incur substantial trading losses.

Emerging Markets Securities Risk: Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets, and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Investments in debt securities of foreign governments present special risks, including the fact that issuers may be unable or unwilling to repay principal and/or interest when due in accordance with the terms of such debt, or may be unable to make such repayments when due in the currency required under the terms of the debt. Political, economic and social events also may have a greater impact on the price of debt securities issued by foreign governments than on the price of U.S. securities. In addition, brokerage and other transaction costs on foreign securities exchanges are often higher than in the United States and there is generally less government supervision and regulation of exchanges, brokers and issuers in foreign countries.

Foreign Securities Risk: Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to inconsistent and potentially less stringent accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. With respect to certain countries, there is the possibility of government intervention and expropriation or nationalization of assets. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal

judgments in certain countries. Because foreign exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell shares. Conversely, shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.

Geographic Investment Risk: To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region. For example, political and economic conditions and changes in regulatory, tax, or economic policy in a country could significantly affect the market in that country and in surrounding or related countries and have a negative impact on the Fund's performance. Currency developments or restrictions, political and social instability, and changing economic conditions have resulted in significant market volatility. As of November 1, 2019, a significant portion of the Index consisted of securities of Australian, Canadian, and United Kingdom issuers.

Australia Risk: Investments in securities of Australian issuers involve risks and special considerations not typically associated with investments in the U.S. securities markets. Investments in Australian issuers may subject each Fund to regulatory, political, currency, security, and economic risk specific to Australia. The Australian economy is heavily dependent on exports from the agricultural and mining sectors. As a result, the Australian economy is susceptible to fluctuations in the commodity markets. The Australian economy is also becoming increasingly dependent on its growing services industry. The Australian economy is dependent on trading with key trading partners, including the United States, China, Japan, Singapore and certain European countries. Reduction in spending on Australian products and services, or changes in any of the economies, may cause an adverse impact on the Australian economy.

Canada Risk: Canada is a significant exporter of natural resources, such as oil, natural gas and agricultural products. As a result, the Canadian economy is susceptible to adverse changes in certain commodities markets. It is also heavily dependent on trading with key partners, including the United States, Mexico, and China. Any reduction in trading with these key partners may adversely affect the Canadian economy. Canada's dependency on the economy of the United States, in particular, makes Canada's economy vulnerable to political and regulatory changes affecting the United States economy.

United Kingdom Risk: The Fund is subject to certain risks specifically associated with investments in the securities of United Kingdom issuers. Investments in British issuers may subject the Fund to regulatory, political, currency, security, and economic risk specific to the United Kingdom. The United Kingdom has one of the largest economies in Europe, and the United States and other European countries are substantial trading partners of the United Kingdom. As a result, the British economy may be impacted by changes to the economic health of the United States and other European countries.

In June 2016, the UK voted in a referendum to leave the EU ("Brexit"). As a result of the referendum, S&P downgraded the United Kingdom's ("UK") credit rating from "AAA" to "AA" and the EU's credit rating from "AA+" to "AA" in the days that followed the vote. Other credit ratings agencies have taken similar actions. On March 29, 2017, the UK

invoked article 50 of the Lisbon Treaty, notifying the European Council of the UK's intention to withdraw from the EU by the end of March 2019. However, after two years of negotiating the UK's withdrawal from the EU, this date has been extended until January 31, 2020. Although it is unclear how withdrawal negotiations will be conducted or concluded, UK businesses are increasingly preparing for a disorderly Brexit, which could have severe consequences for European and UK businesses, the EU and UK economies, the broader global economy, and each Fund's investments. The uncertainty associated with the Brexit process as well as the consequences that follow from its outcome could (i) adversely affect European or worldwide political, regulatory, economic, or market conditions, (ii) contribute to instability in global political institutions, regulatory agencies, and financial markets, and (iii) impact the volatility of exchange rates and interest rates. Brexit could also lead to legal uncertainty and politically divergent national laws and regulations as a new relationship between the UK and EU is defined and the UK determines which EU laws to replace or replicate. In addition, it is possible that measures could be taken to revoke the issue of Brexit, or that portions of the UK could seek to separate and remain a part of the EU. Any of these effects of Brexit could adversely affect any of the companies to which a Fund has exposure and any other assets in which a Fund invests.

Illiquid Investments Risk: In certain circumstances, it may be difficult for the Fund to purchase and sell particular portfolio investments due to infrequent trading in such investments. The prices of such securities may experience significant volatility, make it more difficult for the Fund to transact significant amounts of such securities without an unfavorable impact on prevailing market prices, or make it difficult for the Adviser to dispose of such securities at a fair price.

Index Tracking Risk: Tracking error refers to the risk that the Adviser may not be able to cause the Fund's performance to match or correlate to that of the Index, either on a daily or aggregate basis. There are a number of factors that may contribute to the Fund's tracking error, such as Fund expenses, imperfect correlation between the Fund's investments and those of the Index, rounding of share prices, the timing or magnitude of changes to the composition of the Index, regulatory policies, and high portfolio turnover rate. The Fund incurs operating expenses not applicable to the Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. To the extent the Fund utilizes a sampling approach, it may experience tracking error to a greater extent than if the Fund sought to replicate the Index. Tracking error may cause the Fund's performance to be less than expected.

Industry Concentration Risk: To the extent that the Fund concentrates in the securities of issuers in a particular industry or sector, the Fund may face more risks than if it were diversified more broadly over numerous industries or sectors. Such industry-based risks, any of which may adversely affect the Fund may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand in a particular industry; competition for resources, adverse labor relations, political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in an industry. In addition, at times, an industry or sector may be out of favor and underperform other industries or the market as a whole. As of November 1, 2019, the Index was concentrated in the oil, gas and consumable fuels industry.

Oil, Gas and Consumable Fuels Industry Risk: The oil, gas and consumable fuels industry is cyclical and highly dependent on the market price of fuel. The market value of companies in the oil, gas and consumable fuels industry are strongly affected by the levels and volatility of global commodity prices, supply and demand, capital expenditures on exploration and production, energy conservation efforts, the prices of alternative fuels, exchange rates and technological advances. Companies in this sector are subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these companies' earnings. A significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities. As a result, governmental budget restraints may have a material adverse effect on the stock prices of companies in the industry.

Companies in the oil, gas and consumable fuels industry may also operate in countries with less developed regulatory regimes or a history of expropriation, nationalization or other adverse policies. Companies in the oil, gas and consumable fuels industry also face a significant civil liability from accidents resulting in injury or loss of life or property, pollution or other environmental mishaps, equipment malfunctions or mishandling of materials, and a risk of loss from terrorism or other natural disasters. Any such event could have serious consequences for the general population of the area affected and result in a material adverse impact on the Fund's portfolio securities and the performance of the Fund. Companies in the oil, gas and consumable fuels industry can be significantly affected by the supply of and demand for specific products and services, weather conditions, exploration and production spending, government regulation, world events and general economic conditions.

Issuer-Specific Risk: Changes in the financial condition of an issuer, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can affect a security's or instrument's value. The value of securities of smaller, less well-known issuers can be more volatile than that of larger issuers. Issuer-specific events can have a negative impact on the value of the Fund.

Large-Capitalization Risk: Returns on investments in securities of large companies could trail the returns on investments in securities of smaller and mid-sized companies. The securities of large-capitalization companies may also be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Limited Authorized Participants, Market Makers and Liquidity Providers Risk: Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that may act as Authorized Participants. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares of the Fund may trade at a material discount to NAV and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. An active trading market for shares of the Fund

may not develop or be maintained, and, particularly during times of market stress, Authorized Participants or market makers may step away from their respective roles in making a market in shares of the Fund and in executing purchase or redemption orders. This could, in turn, lead to variances between the market price of the Fund's shares and the value of its underlying securities.

Market Risk: An investment in the Fund involves risks similar to those of investing in any fund of equity securities, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in securities prices. The values of equity securities could decline generally or could underperform other investments. Different types of equity securities tend to go through cycles of out-performance and under-performance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Micro-Capitalization Risk: The micro-capitalization companies in which the Fund may invest may be more vulnerable to adverse business or economic events than larger, more established companies, and may underperform other segments of the market or the equity market as a whole. Securities of micro-capitalization companies generally trade in lower volumes, are often more vulnerable to market volatility, and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole.

New/Smaller Fund Risk: A new or smaller fund's performance may not represent how the fund is expected to or may perform in the long term if and when it becomes larger and has fully implemented its investment strategies. Investment positions may have a disproportionate impact (negative or positive) on performance in new and smaller funds. New and smaller funds may also require a period of time before they are fully invested in securities that meet their investment objectives and policies and achieve a representative portfolio composition. Fund performance may be lower or higher during this "ramp-up" period, and may also be more volatile, than would be the case after the fund is fully invested. Similarly, a new or smaller Fund's investment strategy may require a longer period of time to show returns that are representative of the strategy. New funds have limited performance histories for investors to evaluate and new and smaller funds may not attract sufficient assets to achieve investment and trading efficiencies. If a new or smaller Fund were to fail to successfully implement its investment strategies or achieve its investment objective, performance may be negatively impacted. Further, when a fund's size is small, the fund may experience low trading volumes and wide bid/ask spreads. In addition, the fund may face the risk of being delisted if the fund does not meet certain conditions of the listing exchange. If the fund were to be required to delist from the listing exchange, the value of the fund may rapidly decline and performance may be negatively impacted. There can be no assurance that the Fund will achieve an economically viable size. Any of the foregoing may result in the Fund being liquidated. The Fund may be liquidated by the Board of Trustees without a shareholder vote. In a liquidation, shareholders of the Fund will receive an amount equal to the Fund's NAV, after the deducting the costs of liquidation, including the transaction costs of disposing of the Fund's portfolio investments. Receipt of a liquidation distribution may have negative tax consequences for shareholders. Additionally, during the Fund's liquidation all or a portion of the Fund's portfolio may be invested in a manner not consistent with its investment objective and investment policies.

Non-Diversification Risk: The Fund is a non-diversified investment company under the 1940 Act, meaning that, as compared to a diversified fund, it can invest a greater percentage of its assets in

securities issued by or representing a small number of issuers. As a result, the performance of these issuers can have a substantial impact on the Fund's performance.

Operational Risk: Your ability to transact in shares of the Fund or the valuation of your investment may be negatively impacted because of the operational risks arising from factors such as processing errors and human errors, inadequate or failed internal or external processes, failures in systems and technology, changes in personnel, and errors caused by third party service providers or trading counterparties. Although the Fund attempts to minimize such failures through controls and oversight, it is not possible to identify all of the operational risks that may affect the Fund or to develop processes and controls that completely eliminate or mitigate the occurrence of such failures. The Fund and its shareholders could be negatively impacted as a result.

Passive Investment Risk: The Fund is not actively managed. Therefore, unless a specific security is removed from the Index, or selling that security is otherwise required upon a rebalancing of the Index as addressed in the Index methodology, the Fund generally would not sell a security because the security's issuer was in financial trouble. If a specific security is removed from the Index, the Fund may be forced to sell such security at an inopportune time or for a price other than the security's current market value. An investment in the Fund involves risks similar to those of investing in any equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. It is anticipated that the value of shares of the Fund will decline, more or less, in correspondence with any decline in value of the Index. The Index may not contain the appropriate mix of securities for any particular point in the business cycle of the overall economy, particular economic sectors, or narrow industries within which the commercial activities of the companies comprising the portfolio securities holdings of the Fund are conducted, and the timing of movements from one type of security to another in seeking to replicate the Index could have a negative effect on the Fund. Unlike other funds that select investments based on analyses of financial or other information relating to companies, the economy or markets, the Fund, like other sector-focused or other narrowly-focused index funds, invests in companies included in the Index in accordance with its investment objective of tracking the performance of the Index. There can be no assurance that an investment in such companies would not underperform the broader market or investments with a different focus. The Fund should not be considered a complete investment program. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than other types of mutual funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline.

Sector Focus Risk: The Fund may invest a significant portion of its assets in one or more sectors and thus will be more susceptible to the risks affecting those sectors. While the Fund's sector exposure is expected to vary over time based on the composition of the Index, the Fund anticipates that it may be subject to some or all of the risks described below. The list below is not a comprehensive list of the sectors to which the Fund may have exposure over time and should not be relied on as such.

Energy Sector Risk: Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, energy conservation or use of alternative fuel sources, the success of exploration

projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, or terrorist threats or attacks, among others. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may affect adversely companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure.

Small- and Mid-Capitalization Risk: The small- and mid-capitalization companies in which the Fund invests may be more vulnerable to adverse business or economic events than larger, more established companies, and may underperform other segments of the market or the equity market as a whole. Securities of small- and mid-capitalization companies generally trade in lower volumes, are often more vulnerable to market volatility, and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole. Some small- and mid-capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to large capitalization companies. Also, there is typically less publicly available information concerning small- and mid-capitalization companies than for larger, more established companies. Small- and mid-capitalization companies also may be particularly sensitive to changes in interest rates, government regulation, borrowing costs and earnings.

Trading Risk: Although the shares of the Fund are listed for trading on a listing exchange, there can be no assurance that an active trading market for such shares will develop or be maintained. Secondary market trading in the shares of the Fund may be halted by a listing exchange because of market conditions or for other reasons. In addition, trading in the shares of the Fund is subject to trading halts caused by extraordinary market volatility pursuant to “circuit breaker” rules. There can be no assurance that the requirements necessary to maintain the listing of the shares of the Fund will continue to be met or will remain unchanged.

Shares of the Fund may trade at, above or below their most recent NAV. The per share NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund’s holdings since the prior most recent calculation. The trading prices of the Fund’s shares will fluctuate continuously throughout trading hours based on market supply and demand. The trading prices of the Fund’s shares may deviate significantly from NAV during periods of market volatility. These factors, among others, may lead to the Fund shares trading at a premium or discount to NAV. However, given that shares of the Fund can be created and redeemed only in Creation Units at NAV (unlike shares of many closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their NAVs), the Adviser does not believe that large discounts or premiums to NAV will exist for extended periods of time. While the creation/redemption feature is designed to make it likely that shares of the Fund normally will trade close to its NAV, exchange prices are not expected to correlate exactly with the Fund’s NAV due to timing reasons as well as market supply and demand factors. In addition, disruptions to creations and redemptions or the existence of extreme volatility may result in trading prices that

differ significantly from NAV. If a shareholder purchases at a time when the market price of the Fund is at a premium to its NAV or sells at time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Investors buying or selling shares of the Fund in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of shares of the Fund. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for shares of the Fund (the “bid” price) and the price at which an investor is willing to sell shares of the Fund (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for shares of the Fund based on trading volume and market liquidity, and is generally lower if the Fund’s shares have more trading volume and market liquidity and higher if the Fund’s shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling shares of the Fund, including bid/ask spreads, frequent trading of such shares may significantly reduce investment results and an investment in the Fund’s shares may not be advisable for investors who anticipate regularly making small investments.

Uranium Companies Risk: Uranium Companies may be significantly subject to the effects of competitive pressures in the uranium business and the price of uranium. The price of uranium may be affected by changes in inflation rates, interest rates, monetary policy, economic conditions and political stability. The price of uranium may fluctuate substantially over short periods of time, and the Fund’s share price may be more volatile than other types of investments. In addition, Uranium Companies may be significantly affected by import controls, worldwide competition, liability for environmental damage, depletion of resources, mandated expenditures for safety and pollution control devices, political and economic conditions in uranium producing and consuming countries, and uranium production levels and costs of production.

The primary demand for uranium is from the nuclear energy industry, which uses uranium as fuel for nuclear power plants. A decrease in the demand for nuclear power would have an adverse effect on the performance of the Fund. Demand for nuclear energy may face considerable risk as a result of, among other risks, incidents and accidents, breaches of security, ill-intentioned acts or terrorism, air crashes, natural disasters (such as floods or earthquakes), equipment malfunctions or mishandling in storage, handling, transportation, treatment or conditioning of substances and nuclear materials. Such events could have serious consequences, especially in case of radioactive contamination and irradiation of the environment, for the general population, as well as a material, negative impact on the Fund’s portfolio companies and thus the Fund’s financial situation.

In addition, the nuclear energy industry is subject to competitive risk associated with the prices of other energy sources. Consumers of nuclear energy may have the ability to switch between the nuclear energy and other energy sources, thereby reducing demand for uranium. The prices of crude oil, natural gas and electricity produced from traditional hydro power and possibly other undiscovered energy sources could potentially have a negative impact on the demand for uranium.

Nuclear activity is also subject to particularly detailed and restrictive regulations, with a scheme for the monitoring and periodic re-examination of operating authorization, which primarily takes into account nuclear safety, environmental and public health protection, and also national safety

considerations. These regulations may be subject to significant tightening by national and international authorities. This could result in increased operating costs that could make nuclear power less competitive and thereby reduce demand for uranium.

Portfolio Holdings

A description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's Statement of Additional Information (the "SAI"). In addition, information about the Fund's daily portfolio holdings is available on the Fund's website.

Fund Management

Adviser. Exchange Traded Concepts, LLC, or the Adviser, an Oklahoma limited liability company, is located at 10900 Hefner Pointe Drive, Suite 207, Oklahoma City, Oklahoma 73120, its primary place of business, and 295 Madison Avenue, New York, New York 10017. The Adviser was formed in 2009 and provides investment advisory services to other exchange-traded funds.

Under an investment advisory agreement between the Trust, on behalf of the Fund, and the Adviser, the Adviser provides investment advisory services to the Fund. The Adviser is responsible for, among other things, trading portfolio securities on behalf of the Funds, including selecting broker-dealers to execute purchase and sale transactions or in connection with any rebalancing or reconstitution of the Fund's portfolio, subject to the supervision of the Board. The Adviser also arranges for transfer agency, custody, fund administration and accounting, and other non-distribution related services necessary for the Fund to operate. The Adviser administers the Fund's business affairs, provides office facilities and equipment and certain clerical, bookkeeping and administrative services, and provides its officers and employees to serve as officers or Trustees of the Trust.

For the services it provides to the Fund, the Fund pays the Adviser a fee, calculated daily and paid monthly, at an annual rate of 0.85% on up to \$500 million in assets, 0.80% on the next \$500 million in assets, and 0.70% on assets greater than \$1 billion.

Under the investment advisory agreement, the Adviser has agreed to pay all expenses incurred by the Fund except for the advisory fee, interest, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act.

A discussion regarding the basis for the Board's approval of the investment advisory agreement with the Adviser will be available in the Fund's first Annual or Semi-Annual Report.

Pursuant to an SEC exemptive order and subject to the conditions of that order, the Adviser may, with Board approval but without shareholder approval, change or select new sub-advisers, materially amend the terms of an agreement with a sub-adviser (including an increase in its fee), or continue the employment of a sub-adviser after an event that would otherwise cause the automatic termination of services. Shareholders will be notified of any sub-adviser changes.

Portfolio Managers

Mr. Serowik joined the Adviser from Goldman Sachs in May 2018. He began his career at Spear, Leeds & Kellogg, continuing with Goldman after its acquisition of SLK. During his career of more than 18 years at the combined companies, he held various roles, including managing the global Quant ETF Strats team and One Delta ETF Strats. He designed and developed systems for portfolio risk calculation, algorithmic ETF trading, and execution monitoring, with experience across all asset classes. He graduated from the University of Michigan with a Bachelor of Business Administration degree in Finance.

Mr. Trampe joined the Adviser in May 2018 and has over 17 years of investment management experience, including over 10 years as portfolio manager for passive and active strategies including fully replicated, optimized and swap-based funds for Invesco PowerShares, FocusShares and other sponsors. He has extensive knowledge in trading, research, and analysis within US and Global Equity markets, including UCITS. He was responsible for building internal portfolio management capabilities, trading and infrastructure and daily operations. He graduated with Highest Distinction Honors from the Nebraska Wesleyan University in 1994 with a Bachelor of Science degree in Finance and a minor in Mathematics.

The SAI provides additional information about each portfolio manager's compensation, other accounts managed, and ownership of Fund shares.

Buying and Selling Fund Shares

Shares of the Fund are listed for trading on the Exchange. When you buy or sell the Fund's shares on the secondary market, you will pay or receive the market price. You may incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The shares of the Fund will trade on the Exchange at prices that may differ to varying degrees from the daily NAV of such shares. A "business day" with respect to the Fund is any day on which the Exchange is open for business. The Exchange is generally open Monday through Friday and is closed on weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

NAV per share of the Fund is computed by dividing the value of the net assets of the Fund (*i.e.*, the value of its total assets less total liabilities) by its total number of shares outstanding. Expenses and fees, including management and distribution fees, if any, are accrued daily and taken into account for purposes of determining NAV. NAV is determined each business day, normally as of the close of regular trading of the New York Stock Exchange (ordinarily 4:00 p.m., Eastern time).

The Exchange (or market data vendors or other information providers) will disseminate, every fifteen seconds during the regular trading day, an intraday value of the Fund's shares, also known as the "intraday indicative value," or IIV. The IIV calculations are estimates of the value of the Fund's NAV per share and are based on the current market value of the securities and/or cash required to be deposited in exchange for a Creation Unit. Premiums and discounts between the IIV and the market price may occur. The IIV does not necessarily reflect the precise composition of the current portfolio of securities held by the Fund at a particular point in time or the best

possible valuation of the current portfolio. Therefore, it should not be viewed as a “real-time” update of the NAV per share of the Fund, which is calculated only once a day. The quotations of certain holdings of the Fund may not be updated during U.S. trading hours if such holdings do not trade in the United States. Neither the Fund, the Adviser, nor any of their affiliates are involved in, or responsible for, the calculation or dissemination of the IIVs and make no warranty as to their accuracy.

When determining NAV, the value of the Fund’s portfolio securities is based on market prices of the securities, which generally means a valuation obtained from an exchange or other market (or based on a price quotation or other equivalent indication of the value supplied by an exchange or other market) or a valuation obtained from an independent pricing service. If a security’s market price is not readily available or does not otherwise accurately reflect the fair value of the security, the security will be valued by another method that the Trust’s Fair Value Committee believes will better reflect fair value in accordance with the Trust’s valuation policies and procedures, which were approved by the Board. Fair value pricing may be used in a variety of circumstances, including but not limited to, situations when the value of a security in the Fund’s portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded but prior to the close of the Exchange (such as in the case of a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. Accordingly, the Fund’s NAV may reflect certain portfolio securities’ fair values rather than their market prices.

Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security will materially differ from the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate the Fund’s NAV and the prices used by the Index. This may result in a difference between the Fund’s performance and the performance of the Index.

Frequent Purchases and Redemptions of Fund Shares

The Fund does not impose any restrictions on the frequency of purchases and redemptions of Creation Units; however, the Fund reserves the right to reject or limit purchases at any time as described in the SAI. When considering that no restriction or policy was necessary, the Board evaluated the risks posed by arbitrage and market timing activities, such as whether frequent purchases and redemptions would interfere with the efficient implementation of the Fund’s investment strategy, or whether they would cause the Fund to experience increased transaction costs. The Board considered that, unlike traditional mutual funds, shares of the Fund are issued and redeemed only in large quantities of shares known as Creation Units available only from the Fund directly to Authorized Participants, and that most trading in the Fund occurs on the Exchange at prevailing market prices and does not involve the Fund directly. Given this structure, the Board determined that it is unlikely that trading due to arbitrage opportunities or market timing by shareholders would result in negative impact to the Fund or its shareholders. In addition, frequent trading of shares of the Fund done by Authorized Participants and arbitrageurs is critical to ensuring that the market price remains at or close to NAV.

Distribution and Service Plan

The Fund has adopted a Distribution and Service Plan in accordance with Rule 12b-1 under the 1940 Act pursuant to which payments of up to 0.25% of the Fund's average daily net assets may be made for the sale and distribution of its shares. No payments pursuant to the Distribution and Service Plan will be made during the twelve (12) month period from the date of this Prospectus. Thereafter, 12b-1 fees may only be imposed after approval by the Board. Because these fees, if imposed, would be paid out of the Fund's assets on an on-going basis, if payments are made in the future, these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

Dividends, Distributions and Taxes

Fund Distributions

The Fund pays out dividends from its net investment income and distributes its net capital gains, if any, to investors at least annually.

Dividend Reinvestment Service

Brokers may make available to their customers who own the Fund's shares the DTC book-entry dividend reinvestment service. If this service is available and used, dividend distributions of both income and capital gains will automatically be reinvested in additional whole shares of the Fund purchased on the secondary market. Without this service, investors would receive their distributions in cash. To determine whether the dividend reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker. Brokers may require the Fund's shareholders to adhere to specific procedures and timetables.

Tax Information

The following is a summary of some important U.S. federal income tax issues that affect the Fund and its shareholders. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a comprehensive explanation of the tax treatment of the Fund, or the tax consequences of an investment in the Fund. More information about taxes is located in the SAI.

The Tax Cuts and Jobs Act (the "Tax Act") made significant changes to the U.S. federal income tax rules for taxation of individuals and corporations, generally effective for taxable years beginning after December 31, 2017. Many of the changes applicable to individuals are temporary and only apply to taxable years beginning after December 31, 2017 and before January 1, 2026. There are only minor changes with respect to the specific rules applicable to a regulated investment company, such as the Fund. The Tax Act, however, made numerous other changes to the tax rules that may affect shareholders and the Fund. You are urged to consult with your own tax advisor regarding how the Tax Act affects your investment in the Fund.

You are urged to consult your tax adviser regarding specific questions as to federal, state and local income taxes.

Tax Status of the Fund

The Fund intends to elect and qualify for the special tax treatment afforded to regulated investment companies under the Internal Revenue Code of 1986. If the Fund maintains its qualification as a regulated investment company and meets certain minimum distribution requirements, then the Fund is generally not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, if the Fund fails to qualify as a regulated investment company or to meet minimum distribution requirements it would result in fund-level taxation (if certain relief provisions were not available) and consequently a reduction in income available for distribution to shareholders.

Unless you are a tax-exempt entity or your investment in shares of the Fund is made through a tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when the Fund makes distributions, you sell your shares and you purchase or redeem Creation Units (institutional investors only).

Tax Status of Distributions

- The Fund intends to distribute for each year substantially all of its net investment income and net capital gains income.
- Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional shares.
- The income dividends you receive from the Fund may be taxed as either ordinary income or “qualified dividend income.” Dividends that are reported by the Fund as qualified dividend income are generally taxable to non-corporate shareholders at a maximum tax rate currently set at 20% (lower rates apply to individuals in lower tax brackets). Qualified dividend income generally is income derived from dividends paid to the Fund by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. For such dividends to be taxed as qualified dividend income to a non-corporate shareholder, the Fund must satisfy certain holding period requirements with respect to the underlying stock and the non-corporate shareholder must satisfy holding period requirements with respect to his or her ownership of the Fund’s shares. Holding periods may be suspended for these purposes for stock that is hedged.
- Distributions from the Fund’s short-term capital gains are generally taxable as ordinary income. Distributions from the Fund’s net capital gain (the excess of the Fund’s net long-term capital gains over its net short-term capital losses) are taxable as long-term capital gains regardless of how long you have owned your shares. For non-corporate shareholders, long-term capital gains are generally taxable at a maximum tax rate currently set at 20% (lower rates apply to individuals in lower tax brackets).

- U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% Medicare contribution tax on all or a portion of their “net investment income,” which includes interest, dividends, and certain capital gains (including certain capital gain distributions and capital gains realized on the sale of shares of the Fund). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.
- Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations. The Fund’s investment strategies may limit its ability to distribute dividends eligible for the dividends-received deduction for corporations.
- Distributions paid in January but declared by the Fund in October, November or December of the previous year payable to shareholders of record in such a month may be taxable to you in the previous year.
- You should note that if you purchase shares of the Fund just before a distribution, the purchase price would reflect the amount of the upcoming distribution. In this case, you would be taxed on the entire amount of the distribution received, even though, as an economic matter, the distribution simply constitutes a return of your investment. This is known as “buying a dividend” and should be avoided by taxable investors.
- The Fund (or your broker) will inform you of the amount of your ordinary income dividends, qualified dividend income, and net capital gain distributions shortly after the close of each calendar year.

Tax Status of Share Transactions. Each sale of shares of the Fund or redemption of Creation Units will generally be a taxable event. Any capital gain or loss realized upon a sale of the Fund is generally treated as a long-term gain or loss if the shares have been held for more than twelve months. Any capital gain or loss realized upon a sale of shares of the Fund held for twelve months or less is generally treated as short-term gain or loss. Any capital loss on the sale of shares of the Fund held for six months or less is treated as long-term capital loss to the extent distributions of long-term capital gain were paid (or treated as paid) with respect to such shares. Any loss realized on a sale will be disallowed to the extent shares of the Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the disposition of shares.

A person who exchanges securities for Creation Units generally will recognize gain or loss from the exchange. The gain or loss will be equal to the difference between (i) the market value of the Creation Units at the time of the exchange plus any cash received in the exchange and (ii) the exchanger’s aggregate basis in the securities surrendered plus any cash paid for the Creation Units. A person who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between (i) the exchanger’s basis in the Creation Units and (ii) the aggregate market value of the securities and the amount of cash received. The Internal Revenue Service, however, may assert that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for a person who does not

mark-to-market their holdings), or on the basis that there has been no significant change in economic position.

The Fund may include cash when paying the redemption price for Creation Units in addition to, or in place of, the delivery of a basket of securities. The Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, the Fund may be less tax efficient if it includes such a cash payment than if the in-kind redemption process was used.

To the extent the Fund invests in foreign securities, it may be subject to foreign withholding taxes with respect to dividends or interest the Fund received from sources in foreign countries. If more than 50% of the total assets of the Fund consist of foreign securities, the Fund will be eligible to elect to treat some of those taxes as a distribution to shareholders, which would allow shareholders to offset some of their U.S. federal income tax. The Fund (or your broker) will notify you if it makes such an election and provide you with the information necessary to reflect foreign taxes paid on your income tax return.

Non-U.S. Investors. If you are a nonresident alien individual or a foreign corporation, trust or estate, (i) the Fund's ordinary income dividends will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies, but (ii) gains from the sale or other disposition of shares of the Fund generally are not subject to U.S. taxation, unless you are a nonresident alien individual who is physically present in the U.S. for 183 days or more per year. The Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Different tax consequences may result if you are a foreign shareholder engaged in a trade or business within the United States or if you are a foreign shareholder entitled to claim the benefits of a tax treaty.

Backup Withholding. The Fund (or financial intermediaries, such as brokers, through which shareholders own shares of the Fund) generally is required to withhold and to remit to the U.S. Treasury a percentage of the taxable distributions and the sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has under-reported dividend or interest income, or who fails to certify that he, she, or it is not subject to such withholding.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Fund under all applicable tax laws.

Additional Information

Investments by Other Registered Investment Companies

For purposes of the 1940 Act, the Fund is treated as a registered investment company. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including shares of the Fund. The SEC has issued an exemptive order to

the Trust permitting registered investment companies to invest in exchange-traded funds offered by the Trust, including the Fund, beyond the limits of Section 12(d)(1) subject to certain terms and conditions, including that such registered investment companies enter into an agreement with the Trust.

Continuous Offering

The method by which Creation Units are purchased and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Fund on an ongoing basis, at any point a “distribution,” as such term is used in the Securities Act of 1933 (the “Securities Act”), may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the Prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Fund’s distributor, breaks them down into individual shares of the Fund, and sells such shares directly to customers, or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares of the Fund. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares of the Fund, whether or not participating in the distribution of shares of the Fund, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer-firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with shares of the Fund that are part of an over-allotment within the meaning of Section 4(a)(3)(a) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to shares of the Fund are reminded that under Rule 153 under the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the Fund’s Prospectus is available on the SEC’s electronic filing system. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Premium/Discount Information

When available, information showing the number of days that the market price of the Fund’s shares was greater than the Fund’s NAV per share (*i.e.*, at a premium) and the number of days it was less than the Fund’s NAV per share (*i.e.*, at a discount) for various time periods will be available on the Fund’s website at www.urnmetf.com.

Financial Highlights

No financial highlights information is available for the Fund because it is new and has not commenced operations.

Exchange Traded Concepts Trust

Oklahoma City, Oklahoma 73120

ANNUAL/SEMI-ANNUAL REPORTS TO SHAREHOLDERS

Additional information about the Fund's investments is available in the Fund's annual and semi-annual reports to shareholders. In the annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during the last fiscal year.

STATEMENT OF ADDITIONAL INFORMATION (SAI)

The SAI provides more detailed information about the Fund. The SAI is incorporated by reference into, and is thus legally a part of, this Prospectus.

HOUSEHOLDING

Householding is an option available to certain Fund investors. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Please contact your broker-dealer if you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, or if you are currently enrolled in householding and wish to change your householding status.

HOW TO OBTAIN MORE INFORMATION ABOUT THE FUND

To request a free copy of the latest annual or semi-annual report, the SAI, or to request additional information about the Fund or to make other inquiries, please contact us as follows:

Call:	877-URNM-ETF (876-6383) Monday through Friday 8:30 a.m. to 6:30 p.m. (Eastern Time)	Write:	Exchange Traded Concepts Trust 10900 Hefner Pointe Drive, Suite 207 Oklahoma City, Oklahoma 73120
-------	---	--------	---

Visit: www.urnmetf.com

The SAI and other information are also available from a financial intermediary (such as a broker-dealer or bank) through which the Fund's shares may be purchased or sold.

INFORMATION PROVIDED BY THE SECURITIES AND EXCHANGE COMMISSION

Reports and other information about the Fund are available on the EDGAR Database at <http://www.sec.gov>, and copies of this information also may be obtained, after paying a duplicating fee, by e-mailing the SEC at publicinfo@sec.gov.
